SUMMARY

Senior Backend Engineer with **6+ years** of experience architecting and delivering scalable, high-performance backend systems across healthcare, fintech, enterprise, and AI-driven platforms. Proven expertise in designing distributed micro-services, event-driven architectures, and cloud-native applications using **Node.js, TypeScript, Python, MongoDB, redis, RabbitMQ, and AWS**. Successfully scaled platforms serving **150K+ users**, reduced API latency by **35%**, optimized database performance by **60%**, and led backend architecture modernization for production-critical systems. Passionate about building resilient, AI-enabled platforms using **LLMs, RAG, AI Agents, MCP, and modern cloud technologies**.

SKILLS

System Architecture: Scalable Backend Design, Distributed Systems, Micro-services, Monolithic Architecture, High Availability, Event-Driven Systems, API Design, Caching.

Languages: Node.js, TypeScript, JavaScript (ES6+), PHP, Python

Frameworks & Libraries: Hapi.js, Turborepo, Next.js, Express.js, Laravel, Lumen.

Database & Performance Engineering: MongoDB, MySQL, Redis, Query Optimization.

Cloud & Infrastructure: AWS (EC2, S3, Lambda, SQS, CloudWatch), LocalStack, Docker, Linux, Nginx, PM2.

Testing & Reliability: Unit Testing, Integration Testing, Performance Testing, Debugging, Root Cause Analysis.

Frontend Integration: Angular, React.js, Zustand, Redux.

System Design & Technical Design: API Flow Design, System Diagrams, LLD, Data Flow Modeling, Technical Design Reviews.

Developer Tools: VS Code, Postman, Swagger, Git, MongoDB Compass, MySQL Workbench, TablePlus, Redis-CLI, JIRA.

WORK EXPERIENCE

Senior Full Stack Engineer (Backend Specialist)

Livwell Asia, Vietnam | Noida | Dec' 2022 - Present

- Architected cloud-native backend platforms and distributed micro-services supporting **150,000+ users**, scaling LivWell's insurance ecosystem **3,000+ active policies** while ensuring security, compliance, and high availability.
- Designed and delivered mission-critical backend platforms including **Insurance**, **Monopoly (gamification)**, **Teleport (Marathon)**, and **MoneySign (transaction processing)**, handling high-volume transactional workloads with audit-compliant architectures.
- Developed event-driven micro-services integrating **healthcare providers**, **integrating face-scan AI services**, and **third-party APIs (DiaB)** to enable **automated doctor booking** and **improved user engagement**.
- **Standardized reusable backend components**, **shared libraries**, and **API contracts**, accelerating engineering delivery, improving code consistency, and simplifying micro-services development across teams..
- **Redesigned enterprise data models and API response structures**, reducing data complexity while improving scalability and performance for high-throughput production workloads.
- **Improved API response times by approximately 45%** through advanced MongoDB query optimization, Redis caching, and efficient indexing strategies.

Full Stack Engineer (Backend-Focused)

Finjobs.vn, Vietnam | Hybrid | Jan' 2021 - Dec' 2022

- Built and maintained scalable RESTful APIs and backend services using **Node.js and Laravel**, powering a **high-volume recruitment platform connecting candidates with banking, finance, and insurance organizations**.
- Designed and **optimized MySQL database schemas and queries**, improving data retrieval efficiency by ~40% and reducing query execution time for high-volume recruitment workflows.
- Developed scalable backend administration platforms and workflow automation services supporting **10,000+ monthly candidate interactions** while improving operational efficiency for recruiters and employers.

Software Engineer

Mantra Labs, Bangalore | In-Office | May'2019 - Sept'2020

- Maintained and enhanced **web applications and backend services** using PHP (**Laravel**) and JavaScript
- Integrated **chatbot systems with backend services** and third-party APIs to enable real-time interactions and automated user workflows
- Debugged and resolved **production issues**, improving application stability and reducing critical production incidents by ~30%

Software Engineer Trainee

BridgeLabz, Mumbai | In-Office | Jan 2019 – Jun 2019

- Completed intensive PHP and ReactJS training; built supervised web applications applying full software engineering lifecycle principles.
-

ACHIEVEMENTS & CERTIFICATIONS

- Scaled LivWell's insurance platform from <30 to 3,000+ active policies, directly impacting company revenue.
 - Reduced MongoDB aggregation execution time by over 60%, eliminating production timeout failures through advanced pipeline optimization and indexing.
 - Delivered production-grade enterprise platforms spanning healthcare, insurance, fintech, and AI-powered analytics.
 - Led backend architecture modernization by introducing reusable services, standardized API contracts, and scalable micro-services.
 - Completed **Linux Shell Scripting, MySQL Advanced Topics, React (PWA) certification, Core Java, SQL, HTML/CSS, and C/C++**
-

EDUCATION

Bachelor of Engineering (B.E.)

Oriental College Of Technology, India | Electronics & Communication Engineering | Aug'2013 - Aug'2017

- Developed analytical and problem-solving skills applicable to scalable backend systems and distributed applications.
 - Focused on building **high-performance, modular backend services** with scalable infrastructure and developer-friendly workflows
-

Projects

AI SaaS Platform | In-progress

- **Designed and developing a scalable AI-powered SaaS platform with:** Multi-tenant architecture | Asynchronous job processing | Real-time AI integrations
 - Focused on building **high-performance, modular backend services** with scalable infrastructure and developer-friendly workflows
- Tech Stack:** Node.js, TypeScript, MongoDB, AWS, BullMQ, Redis, pnpm, TurboRepo, LocalStack, REST APIs

LivWell Platform – Insurance, Rewards & Health Ecosystem | Live Product

- Architected a fault-tolerant backend system that managed complex data flow across insurance, rewards, and health ecosystems, ensuring 99.99% uptime and data integrity for critical operations.
 - Enabled **high-volume transaction processing, distributed workflows, and secure handling of PII data** for **280K+ users**
 - Improved system reliability and performance through **optimized MongoDB queries, caching strategies, and micro-services architecture**
- Tech Stack:** Node.js, Hapi.js, TypeScript, MongoDB, redis, AWS, micro-services, REST APIs
